Student Startup Crowdfunding Platform

Lab 2 SE Using Jira

Name: Aks Raj Singh

SRN: PES2UG24CS044

Reflection Questions

1.Did your estimations reflect the actual effort?

The estimates were reasonably aligned with the actual effort. Story points provided a useful measure of relative task complexity and helped in planning the work across the two sprints.

2.Was your backlog well-prioritized?

Yes. The backlog was organized around the main functional areas of the platform: Campaign Management, Pledging & Rewards, Milestone Verification & Fund Release, and Campaign Notifications. The work was divided across two sprints based on these feature groups.

3.How did your simulated sprint align with your plan?

The two simulated sprints followed the planned feature grouping. Sprint 1 covered the core campaign, pledging, and milestone-verification work, while Sprint 2 covered pledge payment, fund release, and notification features.

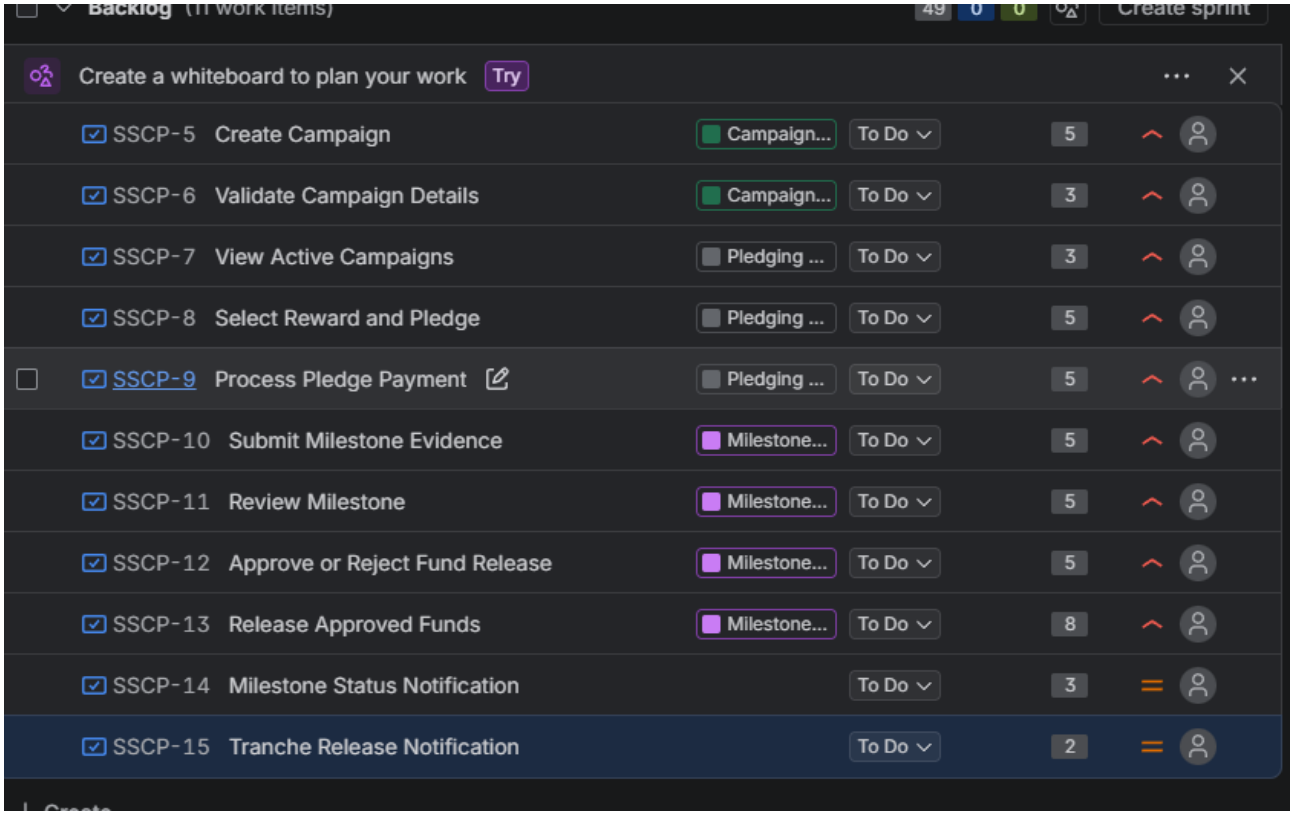

4.What insights did the burndown chart give about your team's capacity?

The burndown charts showed the remaining story points and the progress made during each sprint. They provided a clear comparison between the planned guideline and the actual remaining work, giving an indication of the team's capacity and completion rate.

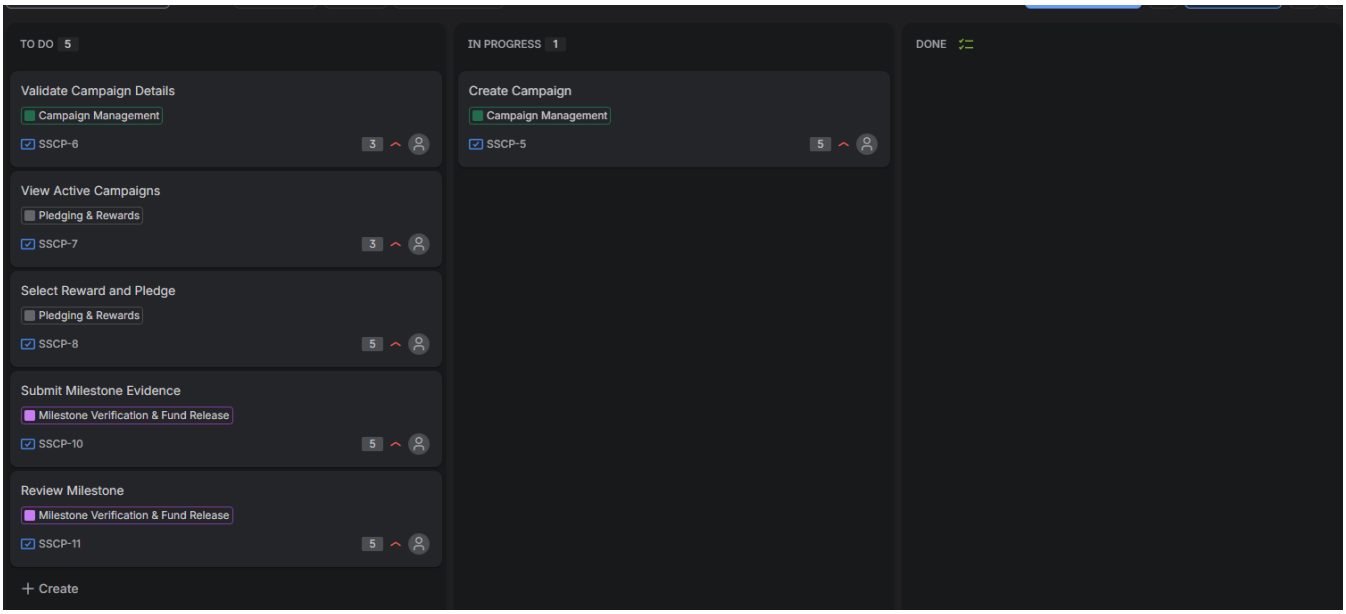

Submission Evidence

The following Jira screenshots provide evidence of the backlog, story-point assignments, sprint boards, and burndown charts for both completed sprints.

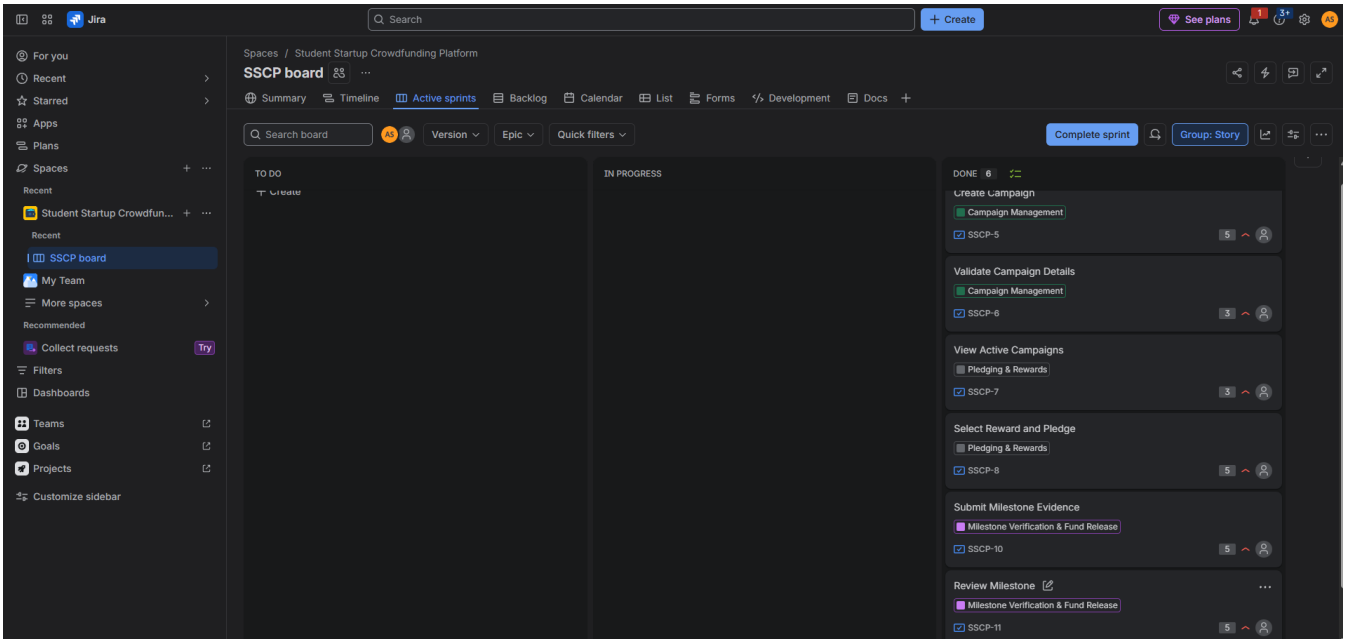

Jira Backlog with Epics and User Stories

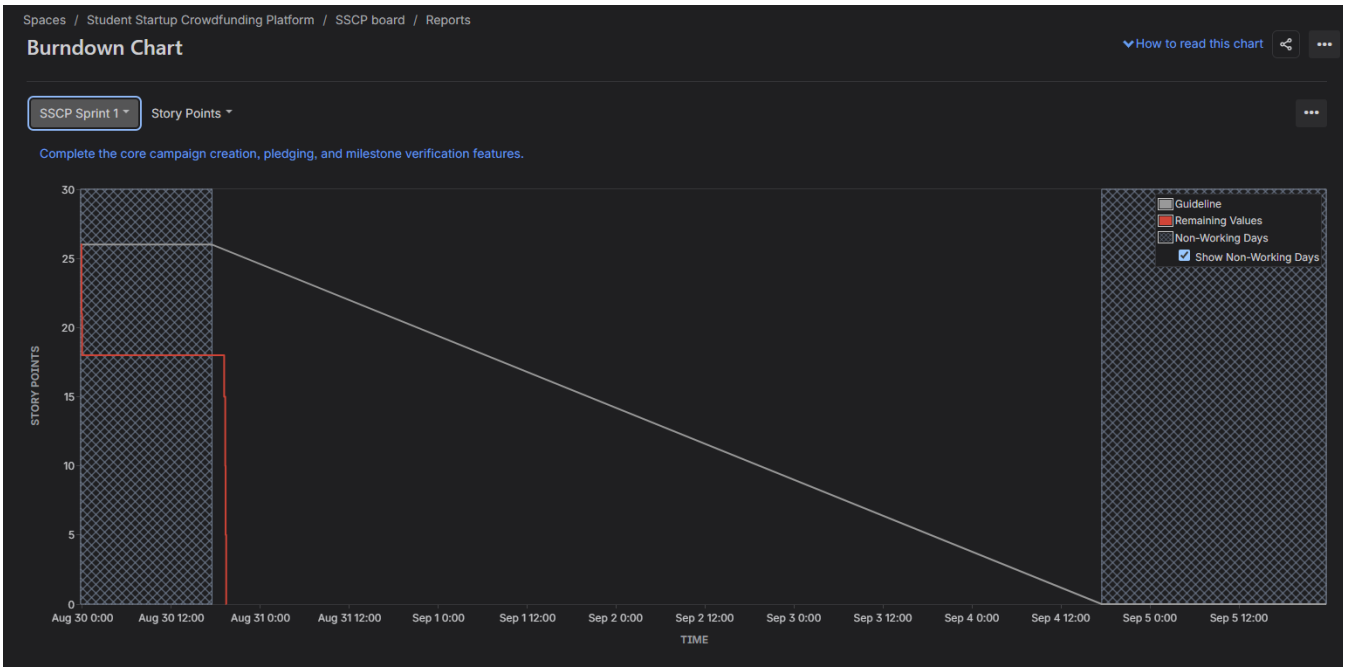

Sprint 1 – Active Sprint (In Progress)

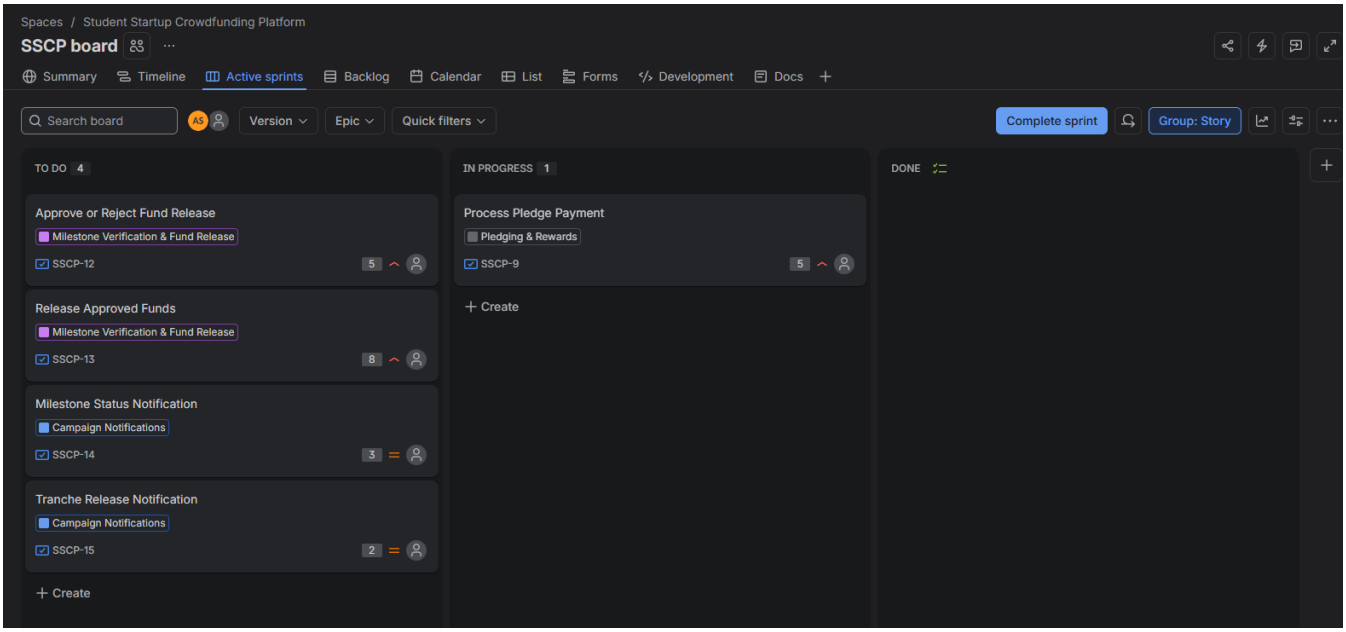

Sprint 1 – Active Sprint (Completed)

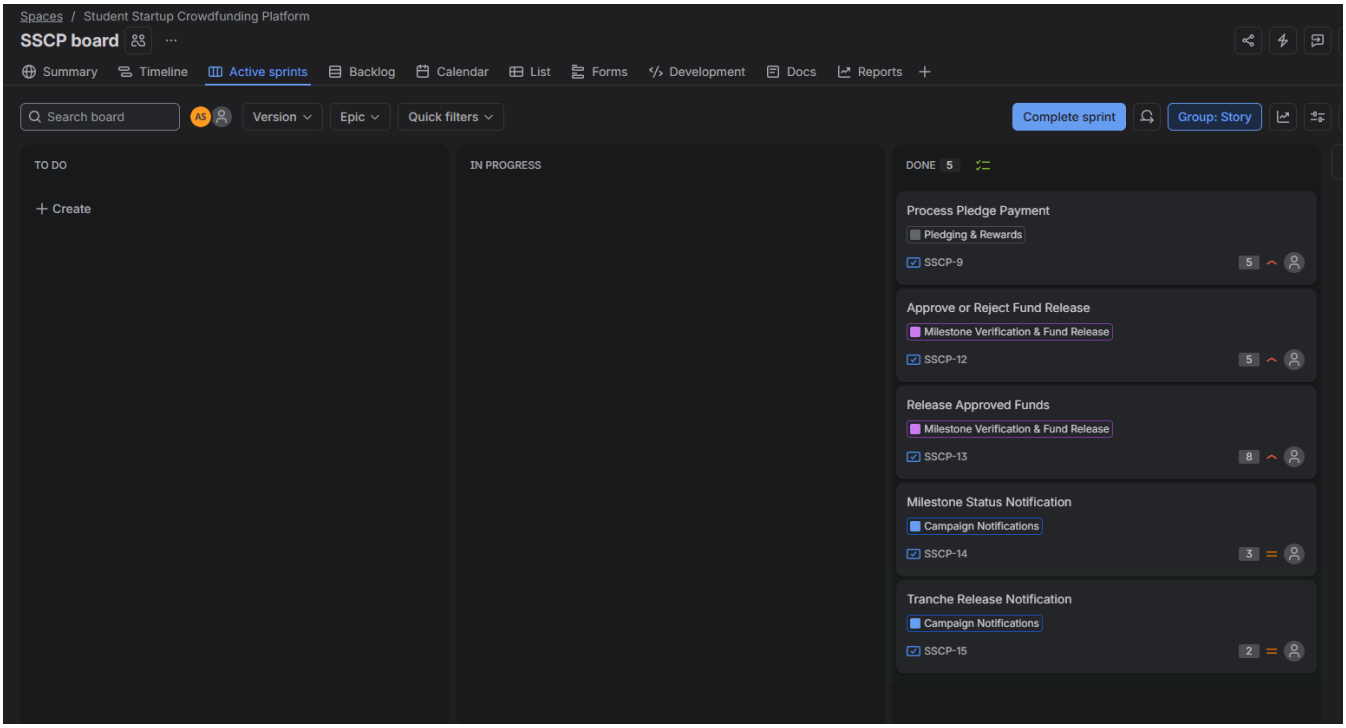

Sprint 1 – Burndown Chart

Sprint 2 – Active Sprint

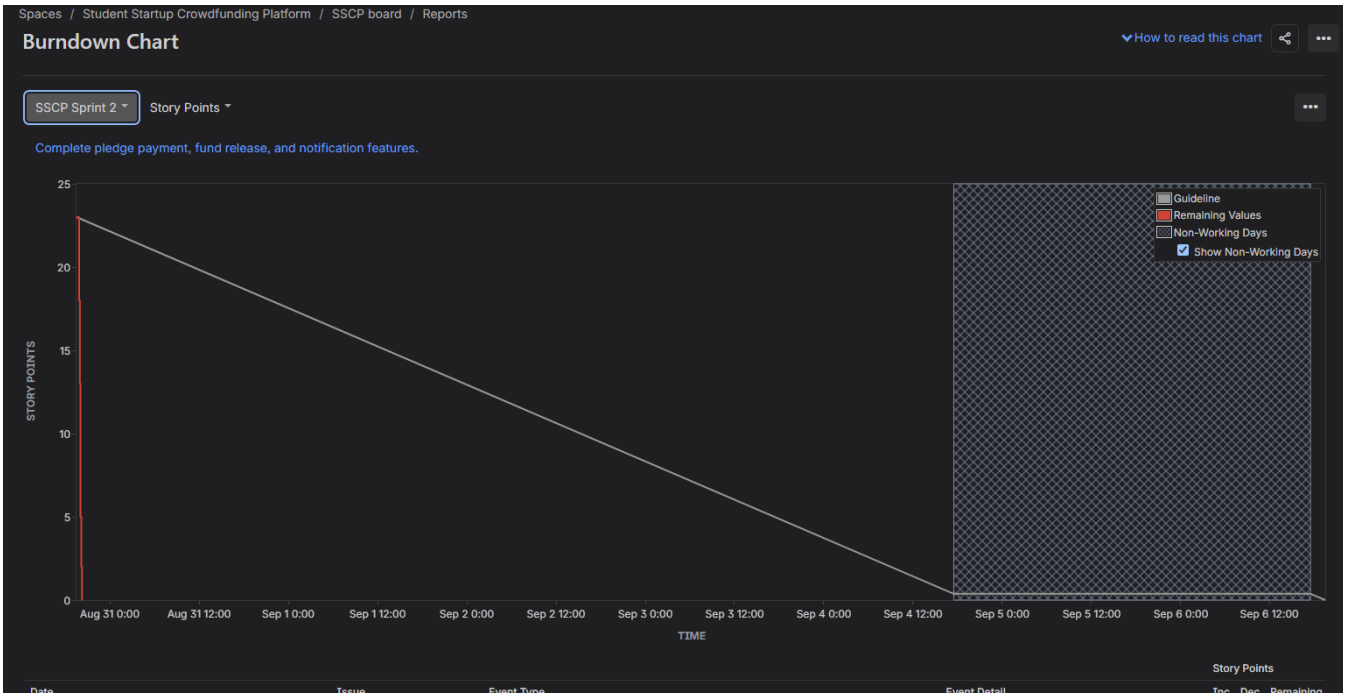

Sprint 2 – Completed Work

Sprint 2 – Burndown Chart

Sprint 2 – Burndown Chart (Final View)
